Hot air coming out of your Audi's air conditioner can be attributed to several potential issues: Wearing compressor. One of the most common parts related to AC issues is the compressor. The compressor is responsible for processing the refrigerant in a way that cools the entire cabin by making the air blowing through the vents cold. If the compressor is broken or worn out, then it will result in hot air rather than cool air blowing through the vents.

When the air conditioner in your 2009 Audi Q7 starts blowing hot air, you likely have a freon leak. Recharging the freon in your AC system is an inexpensive and easy first step to restoring the cooling capacity of your A/C system. Most refrigerants include a leak sealer that will seal small leaks in addition to filling the R134a refrigerant.
