Solved Problems in Classical Mechanics
 $v(t) = \frac{dr(t)}{dt}$, (1) and the acceleration
 $a(t)$, which is the time rate of change of
the velocity, $a(t) = \frac{dv(t)}{dt}$. (2) It follows
from (1) and (2) that the acceleration is
also the second derivative $a = \frac{d^2r}{dt^2}$.
(3) Sometimes use is made of Newton's
notation, where a dot denotes
differentiation with

This first course in the physics curriculum introduces classical mechanics. Historically, a set of core concepts—space, time, mass, force, momentum, torque, and angular momentum—were introduced in classical mechanics in order to solve the most famous physics problem, the motion of the planets. The principles of mechanics successfully described many other phenomena encountered in the world.
