Analysis includes the analysis of sales price, fixed costs, variable costs, the number of goods sold, and how it affects the profit of the business. The aim of a company is to earn a profit, and profit depends upon a large number of factors, most notable among them is the cost of manufacturing and the volume of sales.

Cost-Volume-Profit Analysis Overview This chapter explains a planning tool called cost-volume-profit (CVP) analysis. CVP analysis examines the behavior of total revenues, total costs, and operating income (profit) as changes occur in the output level, selling price, variable cost per unit, and/or fixed costs of a product or service.
