The two quotations given above (both taken from our Top 10 Engineering Quotes) succinctly sum up the difference between science and engineering. They reinforce the idea that science is a tool of engineering, but science and engineering each have their own distinct goals. Science aims to know; engineering aims to do.

The Difference Between Science and Engineering ...

Before design became a profession in industry, engineers were doing the design job which was so-called "engineering design". Then engineering and design split because the need of design increased and the scope expanded, especially as design becoming human-centered. Now, engineering and design are working side by side with different focuses: engineering solve problems between parts and parts in the artificial world; design solve problems between human and the artificial world. 9
