I chose type of winding based on my motors specifications. In winding books there is a lot of different types of winding diagrams. Each one is drawn for different amount of pole pairs. I took winding on the picture from winding book. My new winding was three phase single layer concentric winding.

Here we see a winding diagram for a 3-phase AC induction motor or brushless PM motor (IPM), having 4 poles and 36 slots. This winding could in fact be used with any AC machine, including a synchronous reluctance motor or a wound-field synchronous motor or generator. In most respects it is a regular classical example, and the objective here is to review some of the features of the diagram and its conventions, rather than the winding itself or any particular machine.

A three-phase motor must be wired based on the diagram on the faceplate. The first step is to figure out the voltage of your phases. In the United States, for low voltage motors (below 600v), you can expect either 230v or 460v. That being said, there is a wide range of different motors and what you have on hand can be completely different. Make sure that the voltage you will be supplying to your motor matches the specifications on the faceplate.

The most common failure mode of a 3 phase AC motor is burnt winding or shorted winding leading to the damage of the motor. Often it is required to test the winding of the 3 phase windings with the aid of a multimeter or ohmmeter to determine whether the motor is still good or burnt or shorted.

The life of a three-phase stator winding can be shortened dramatically when the motor is exposed to unfavorable operating conditions — electrical, mechanical or environmental. The winding failures illustrated here are typical of what can happen in such circumstances.

Induction motor is a generalized transformer. Difference is that transformer is an alternating flux machine while induction motor is rotating flux machine. Rotating flux is only possible when 3 phase voltage (or poly phase) which is 120 degree apart in time is applied to a three phase winding (or poly phase winding) 120 degree apart in space then a three phase rotating magnetic flux is ...

For three phase motors, connection type is either Star (Y) or Delta AC Motor Winding Continuity Test Using a multimeter, check the continuity of motor winding from phase to phase ( U to V, V to W , W to U ).Each phase to phase must have a continuity if winding is OK. If any particular phase fails the continuity test, your motor is probably burnt.
