Every piece of rotating machinery (motor, pump, etc.) has a natural frequency or vibration of operation. As the discharge head of the pump supports the motor, it is the responsibility of the pump manufacturer to design the discharge head to withstand the natural frequencies of the motor through its operating speed range (say 45 - 60 HZ, or 1350 - 1800 rpm).

Better than Metal The simplicity and durability of our polymer bearing designs and systems provide a superior alternative to oil or grease lubricated metal bearings.

### Home - Thordon Bearings Inc.

Packing and mechanical seals used in fluid applications both require constant cooling and lubrication, and water is the most common means for achieving this. Seal water is used for cooling the seal and lubricating the seal faces. Using too much water for this application isn't a problem, but excess water consumption can drive material costs up.
